EMV® Specification Bulletin No. 301
First Edition March 2024

Update ParseAndStoreCardResponse

This Specification Bulletin changes the ParseAndStoreCardResponse routine for the handling of proprietary tags.

Applicability

This Specification Bulletin applies to:

- *EMV Contactless Specifications for Payment Systems, Book C-2, Kernel 2 Specification, Version 2.11 – June 2023.*

Related Documents

- *None*

Effective Date

- *1 April, 2024*

Description

This Specification Bulletin introduces an update for the ParseAndStoreCardResponse service. The service no longer returns FALSE when the update conditions of a data object returned from the card do not include the RA Signal

In this case, the data object returned from the card will now be ignored.

Specification Changes

Change in section 4.1.3 the ParseAndStoreCardResponse as follows:

Boolean ParseAndStoreCardResponse(TLV String)

~~TLV Encoding Error := FALSE~~

Parse TLV String according the Basic Encoding Rules in [ISO/IEC 8825-1]. ~~and set TLV Encoding Error to TRUE i~~If parsing error, then return FALSE.

If TLV String is not a single constructed or primitive data object, then ~~set TLV Encoding Error to TRUE~~ return FALSE.

~~IF [TLV Encoding Error]~~
~~THEN~~
~~Return FALSE~~
~~ELSE~~
FOR every primitive TLV in TLV String
{
IF [~~NOT (IsKnown(T) AND~~
~~class of T is Private class[3] AND~~
~~NOT~~ update conditions of T include RA Signal ~~)~~]
THEN
IF [IsKnown(T)]
THEN
IF [(IsNotPresent(T) OR IsEmpty(T))
~~AND~~
~~update conditions of T include RA Signal~~
AND
L is within the range specified by Length field of the data object with tag T in the data dictionary in Annex A
AND
TLV is included in the correct template (if any) within TLV String[4]
]
THEN
Store LV in the TLV Database for tag T
ELSE
Return FALSE
ENDIF
ELSE

[3] As defined in Annex B of [EMV Book 3], the tag is Private class if bits b7 and b8 of the first byte of the tag are both set to 1b.
[4] Data objects must be included in the correct template as indicated in the data dictionary in Annex A. Data objects for which no template is indicated ("–") must not be returned in a template from the card.

~~IF [IsPresent(T)]~~
~~THEN~~
IF [IsEmpty(T) ~~AND update conditions of T include RA Signal~~]
THEN
Store LV in the TLV Database for tag T
ELSE
Return FALSE
ENDIF
~~ENDIF~~
ENDIF
ENDIF
}
Return TRUE
ENDIF

Without change indication this becomes:

Boolean ParseAndStoreCardResponse(TLV String)

Parse TLV String according the Basic Encoding Rules in [ISO/IEC 8825-1]. If parsing error, then return FALSE.

If TLV String is not a single constructed or primitive data object, then return FALSE.

FOR every primitive TLV in TLV String
{
IF [update conditions of T include RA Signal]
THEN
IF [IsKnown(T)]
THEN
IF [(IsNotPresent(T) OR IsEmpty(T))
AND L is within the range specified by Length field of the data object with tag T in the data dictionary in Annex A
AND TLV is included in the correct template (if any) within TLV String[5]]
THEN
Store LV in the TLV Database for tag T
ELSE
Return FALSE
ENDIF
ELSE
IF [IsEmpty(T)]
THEN
Store LV in the TLV Database for tag T
ELSE
Return FALSE
ENDIF
ENDIF
ENDIF
}
Return TRUE

[5] Data objects must be included in the correct template as indicated in the data dictionary in Annex A. Data objects for which no template is indicated ("–") must not be returned in a template from the card.
