## Introduction to the P-ROV Template for P2PE Applications

This document, the *PCI Point-to-Point Encryption: Template for Report on Validation for use with P2PE v3.1 for P2PE Application Assessments* (“Application P-ROV Reporting Template”), is the mandatory template for completing a P2PE Report on Validation (P-ROV) for P2PE Application assessments against *P2PE: Security Requirements and Testing Procedures, v3.1 Standard* (“P2PE Standard”).

### **Use of this Reporting Template is mandatory for each P2PE v3.1 P2PE Application assessment.**

Tables have been included in this template to facilitate the reporting process for certain lists and other information as appropriate. The tables in this template may be modified to increase/decrease the number of rows, as necessary. Additional appendices may be added if the assessor feels there is relevant information to be included that is not addressed in the current format. However, the assessor must not remove any details from the tables provided in this document. Personalization, such as the addition of company logos, is acceptable but limited to the title page.

**Do not delete any content from any place in this document, including this section and the versioning above. These instructions are important for the assessor as they complete reporting, but also provide context for the report recipient(s). Addition of text or sections is applicable within reason, as noted above.**

A P2PE compliance assessment involves thorough testing and assessment activities, from which the assessor will generate detailed work papers. These work papers contain comprehensive records of the assessment activities, including observations, results of system testing, configuration data, file lists, interview notes, documentation excerpts, references, screenshots, and other evidence collected during the course of the assessment. The P-ROV is effectively a **summary of evidence** derived from the assessor’s work papers to describe how the assessor performed the validation activities and how the resultant findings were reached. At a high level, the P-ROV provides a comprehensive **summary of testing activities performed and information collected** during the assessment against the P2PE Standard. The information contained in a P-ROV must provide enough detail and coverage to verify that the P2PE submission is compliant with all applicable P2PE requirements.

The following table summarizes the P2PE v3.1 P-ROVs and the applicability of each P-ROV relative to the assessment type. Acronyms used: *SP = Solution Provider; CP = Component Provider*

P-ROV	APPLICABLE ASSESSMENTS	PURPOSE
<b>Solution</b>	Solution (SP)	<p>The Solution P-ROV is mandatory for all P2PE Solution assessments, at a minimum. Additional P-ROVs (below) may be required depending on the scope of the assessment.</p> <p><b>Note:</b> A separate Merchant-Managed Solution (MMS) P-ROV is used for MMS assessments. References to "Solution P-ROV" below can be substituted with "MMS P-ROV" for MMS assessments.</p>
<b>Encryption Management Services (EMS)</b>	Solution (SP) Encryption Management CP (EMCP) POI Deployment CP (PDCP) POI Management CP (PMCP)	<p>Encryption Management Services relates to the distribution, management, and use of POI devices in a P2PE Solution.</p> <p><b>Solution assessments</b> that have not satisfied the entirety of their Encryption Management Services (Domain 1 with Domain 5) with applicable Validated P2PE Component Providers must complete the EMS P-ROV in addition to the Solution P-ROV.</p> <p><b>Component Provider assessments</b> for an EMCP, PDCP, or a PMCP must complete the EMS P-ROV.</p>
<b>P2PE Application</b>	P2PE Application	<p>Any assessment that utilizes software on the PTS-approved POI devices intended for use in a P2PE Solution that has the potential to access clear-text account data must complete a P2PE Application P-ROV (one for each application).</p>
<b>Decryption Management Services (DMS)</b>	Solution (SP) Decryption Management CP (DMCP)	<p>Decryption Management Services relates to the management of a decryption environment, including applicable account-data decryption devices used to support a P2PE Solution.</p> <p><b>Solution assessments</b> that have not satisfied the entirety of their Decryption Management Services (Domain 4 with Domain 5) with applicable Validated P2PE Component Providers must complete the DMS P-ROV in addition to the Solution P-ROV.</p> <p><b>Component Provider assessments</b> for a DMCP must complete the DMS P-ROV.</p>
<b>Key Management Services (KMS)</b>	Solution (SP) Key-injection Facility (KIF) Key Management CP (KMCP) Key Loading CP (KLCP) CA/RA	<p>Key Management Services relates to the generation, conveyance, management, and loading of cryptographic keys including the management of associated devices.</p> <p><b>Solution assessments</b> that have not satisfied the entirety of key management services requirements (Domain 5) either through the use of Validated P2PE Component Providers and/or through the assessment of their Encryption Management Services and/or Decryption Management Services must complete the KMS P-ROV. E.g., if the P2PE Solution offers remote key-distribution using asymmetric techniques for the distribution of keys to POI devices for use in connection with account-data encryption, or the operation of an applicable CA/RA. Or if any other relevant key management service that has not already been assessed as part of the inclusion of a Validated P2PE Component Provider and/or as part of the Domain 1 and Domain 4 assessment scope of the Solution assessment, then the Solution assessment must include the use of the KMS P-ROV.</p> <p><b>Component Provider assessments</b> for a KIF, KMCP, KLCP, or a CA/RA must complete the KMS P-ROV.</p>

## P-ROV Sections

The P-ROV includes the following sections that must be completed in their entirety:

- Section 1: Contact Information and Report Date
- Section 2: Summary Overview
- Section 3: Details and Scope of P2PE Assessment
- Section 4: Findings and Observations

This Reporting Template includes tables with Reporting Instructions. Details provided should focus on concise quality of detail, rather than lengthy, repeated verbiage.

## P-ROV Summary of Findings

This version of the P2PE Reporting Template reflects an on-going effort to simplify assessor summary reporting. All summary findings for “In Place,” “Not in Place,” and “Not Applicable” are found at the beginning of section 4 “Findings and Observations” and are only addressed at that high-level. The summary of the overall compliance status is at section 2.8 “Summary of P2PE Assessment Compliance Status.”

The following table is a representation when considering which selection to make. Assessors must select only one response at the sub-requirement level, and the selected response must be consistent with reporting within the remainder of the P-ROV and other required documents, such as the relevant P2PE Attestation of Validation (P-AOV).

RESPONSE	WHEN TO USE THIS RESPONSE
In Place	The expected testing has been performed, and all elements of the requirement have been met as stated. Requirements fulfilled by other P2PE Components or Third Parties should be In Place, unless the requirement does not apply.
Not in Place	Some or all elements of the requirement have not been met, or are in the process of being implemented, or require further testing before it will be known if they are in place.
N/A (Not Applicable)	<p>‘Not Applicable’, or ‘N/A’, is only acceptable as a finding where the requirement, through testing and review, is determined to not apply to the P2PE Product.</p> <p>All N/A responses require reporting on testing performed (including interviews conducted and documentation reviewed) and must explain how it was determined that the requirement does not apply within the scope of the assessment for the P2PE Product.</p> <p><b>Note:</b> ‘Not Applicable’ cannot be used by entities that provide only partial aspects of a defined Component Provider service to validate to that Component Provider type. Refer to the “P2PE Applicability of Requirements” in the P2PE Program Guide.</p>

**Note:** Checkboxes have been added to the “Summary of Assessment Findings” so that the assessor may double click to check the applicable summary result. Hover over the box you’d like to mark and click once to mark with an ‘x.’ To remove a mark, hover over the box and click again. Mac users may instead need to use the space bar to add the mark.

## P-ROV Reporting Details

The reporting instructions in the Reporting Template are clear as to the intention of the response required. There is no need to repeat the testing procedure or the reporting instruction within each assessor response. As noted earlier, responses should be specific, but simple. Details provided should focus on concise quality of detail, rather than lengthy, repeated verbiage.

Assessor responses will generally fall into categories such as the following:

- **“Identify the P2PE Assessor who confirms...”**

Indicates only an affirmative response where further reporting is deemed unnecessary by PCI SSC. The P2PE Assessor’s name or a Not Applicable response are the two appropriate responses here. A Not Applicable response will require brief reporting to explain how this was confirmed via testing.

- **Document name or interviewee reference**

At section 3.6, “Documentation Reviewed,” and section 3.7, “Individuals Interviewed,” there is a space for a reference number; ***it is the P2PE Assessor’s choice*** to use the document name/interviewee job title or the reference number in their responses. A listing is sufficient here, no further detail required.

- **Sample reviewed**

Brief list is expected or sample identifier. Where applicable, it is the P2PE Assessor’s choice to list out each sample within the reporting or to utilize sample identifiers from the sampling summary table.

- **Brief description/short answer – “Describe how...”**

These responses must be a narrative response that provides explanation as to the observation—both a summary of what was witnessed and how that verified the criteria of the testing procedure.

## Do's and Don'ts: Reporting Expectations

DO:	DON'T:
<ul style="list-style-type: none"> <li>▪ Complete all applicable P-ROVs based on the assessment type.</li> <li>▪ Complete all sections in the order specified, with concise detail.</li> <li>▪ Read and understand the intent of each Requirement and Testing Procedure.</li> <li>▪ Provide a response for every Testing Procedure, even if N/A.</li> <li>▪ Provide sufficient detail and information to demonstrate a finding of “in place” or “not applicable.”</li> <li>▪ Describe how a Requirement was verified as the Reporting Instruction directs, not just that it was verified.</li> <li>▪ Ensure all parts of the Testing Procedure are addressed.</li> <li>▪ Ensure the response covers all applicable application and/or system components.</li> <li>▪ Perform an internal quality assurance review of the P-ROV for clarity, accuracy, and quality.</li> <li>▪ Perform an internal quality assurance review of all submitted P-ROVs and the details within the PCI SSC Portal.</li> <li>▪ Provide useful, meaningful diagrams, as directed.</li> </ul>	<ul style="list-style-type: none"> <li>▪ Don’t report items in the “In Place” column unless they have been verified as being “in place.”</li> <li>▪ Don’t include forward-looking statements or project plans in responses.</li> <li>▪ Don’t simply repeat or echo the Testing Procedure in the response.</li> <li>▪ Don’t copy responses from one Testing Procedure to another.</li> <li>▪ Don’t copy responses from previous assessments.</li> <li>▪ Don’t include information irrelevant to the assessment.</li> <li>▪ Don’t mark “N/A” without providing an explanation and justification for why it is “N/A”.</li> </ul>

# P-ROV P2PE Application Template for the P2PE v3.1 Standard

The use of this template is mandatory for creating a P2PE Report on Validation (P-ROV) for submission to PCI SSC for P2PE Applications assessed to the P2PE Standard. Complete the remainder of this P-ROV as instructed.

## 1. Contact Information and Report Date

1.1 Contact Information			
<b>P2PE Application Vendor Contact Information</b>			
Company name:		Company URL:	
Company contact name:		Contact e-mail address:	
Contact phone number:		Company address:	
<b>P2PE Assessor Company and Lead Assessor Contact Information</b>			
<p><b>Note:</b> P2PE Application Assessments can only be performed by PA-QSA (P2PE) Companies and by PA-QSA(P2PE) assessors of those companies. Refer to the latest P2PE Program Guide for details.</p>			
Company name:		Assessor company credentials:	<input type="checkbox"/> QSA (P2PE) <input type="checkbox"/> PA-QSA (P2PE)
Company Servicing Markets for P2PE: (see <a href="https://www.pcisecuritystandards.org/assessors_and_solutions/point_to_point_encryption_assessors">https://www.pcisecuritystandards.org/assessors_and_solutions/point_to_point_encryption_assessors</a> )			
Assessor name:		Assessor credentials:	<input type="checkbox"/> QSA (P2PE) <input type="checkbox"/> PA-QSA (P2PE)
Assessor phone number:		Assessor e-mail address:	
Confirm that internal QA was fully performed on the entire P2PE submission, per requirements in the relevant program documentation.		<input type="checkbox"/> Yes <input type="checkbox"/> No ( <i>If No, this is not in accordance with PCI Program requirements</i> )	
QA reviewer name:		QA reviewer credentials: <i>(Leave blank if not applicable)</i>	
QA reviewer phone number:		QA reviewer e-mail address:	
<i>Provide details for any additional P2PE Assessors involved with the P2PE assessment. Add additional rows as needed.</i>			
Assessor name:		Assessor credentials:	<input type="checkbox"/> QSA (P2PE) <input type="checkbox"/> PA-QSA (P2PE)
Assessor phone number:		Assessor e-mail address:	

## 1.2 Date and Timeframe of Assessment

<b>Date of Report:</b> (DD-MMM-YYYY) <i>Ex: 01-Jan-2021</i>	<b>Timeframe of Assessment:</b> (From DD-MMM-YYYY To DD-MMM-YYYY)
---	--

## 1.3 Additional Services Provided by PA-QSA(P2PE) / PA-QSA(P2PE) Company

The current version of the “Qualification Requirements for Point-to-Point Encryption (P2PE)<sup>TM</sup> Qualified Security Assessors – QSA (P2PE) and PA-QSA (P2PE)” (P2PE QSA Qualification Requirements), section “Independence”, specifies requirements for P2PE QSAs around disclosure of such services and/or offerings that could reasonably be viewed to affect independence of assessment. Complete the sections below after review of this portion of the P2PE QSA Qualification Requirements to ensure responses are consistent with documented obligations.

<ul style="list-style-type: none"> <li>▪ Disclose all services offered to the assessed entity by the PA-QSA(P2PE) / PA-QSA(P2PE) company, including but not limited to whether the assessed entity uses any security-related devices or security-related applications that have been developed or manufactured by the QSA, or to which the QSA owns the rights or that the QSA has configured or manages;</li> <li>▪ Describe efforts made to ensure no conflict of interest resulted from the above mentioned services provided by the PA-QSA(P2PE) / PA-QSA(P2PE) company:</li> </ul>	
---	--

## 1.4 P2PE Standard Version Used for Assessment

Version of the P2PE Standard used for this assessment ( <i>must be v3.1</i> ):	
--	--

## 2. Summary Overview

2.1 P2PE Application Assessment Details			
<b>Application Name:</b>	<b>Application Version #:</b>		
Is the P2PE Application currently (or was it previously) listed on the PCI SSC List of Validated P2PE Applications?		<input type="checkbox"/> Yes ( <i>If Yes, provide listing reference #:</i> )	
		<input type="checkbox"/> No ( <i>If No, the application has never been listed</i> )	
<b>Type of Assessment</b> Check the type of assessment this P2PE Application assessment is associated with:			
<input type="checkbox"/> Separately-listed P2PE Application	<p>Complete a P2PE Application P-ROV <b>for each</b> unique P2PE Application (<i>i.e., only one application per P2PE Application P-ROV</i>) intended to be Accepted and Listed on the PCI SSC Validated List of P2PE Applications.</p> <p>If the P2PE Application is to be associated with a Solution or an applicable Component assessment, the P2PE Application must be Accepted and Listed prior to the submission of the Solution or Component such that the Validated P2PE Application listing reference number can be denoted as necessary in the respective P-ROV(s) <b>prior to</b> submission of the Solution or Component.</p>		
<input type="checkbox"/> Component ( <i>read the Note →</i> )	<p><b>Note:</b> It is not possible to submit a P2PE Application assessment with a P2PE Component Assessment. Complete the P2PE Application assessment as a 'Separately-listed P2PE Application'.</p>		
<input type="checkbox"/> Merchant-Managed Solution	Complete a P2PE Application P-ROV for each P2PE Application used by the Merchant-Managed Solution.		
<input type="checkbox"/> P2PE Solution Only <i>(not separately-listed)</i>	<p><b>Note:</b> If the application is intended to be separately listed as a Validated P2PE Application, then complete the P2PE Application assessment as a 'Separately-listed P2PE Application'.</p> <p>If the application is only associated with the P2PE Solution, complete a P2PE Application P-ROV and submit it with all the required P-ROVs as dictated by the scope of the Solution assessment. The application will not be separately listed and is <b>only</b> validated for use in the Solution.</p>		
	Enter the Solution Name:		
<b>P2PE Application Details (complete for all assessment types above)</b> Provide all the required application details on the following page – do <b>not</b> leave anything blank:			

**Describe the purpose and function of the application:**

**Describe how the application is sold, distributed, or licensed to third parties (indicate N/A if this does not apply, e.g., for MMS):**

**Description of how the application is designed (e.g., as a standalone application, in modules, or as part of a suite of applications):**

**Description of how application stores, processes and/or transmits account data:**

## 2.2 Versioning Methodology

Describe how the vendor indicates application changes via their version numbers / versioning methodology:

## 2.3 Third-Party Entities Involved in the P2PE Application

Are Third Party entities involved in the scope of the Application assessment?

Yes (*If Yes, provide details below - insert additional rows as necessary*)

No (*If No, leave remainder of this table blank*)

Entity Name	Entity Location(s)	Role/Function

Provide any additional details regarding the use of Third Parties, as necessary. Otherwise, check **No Additional Details**.

No Additional Details

<Additional Details, as needed>

## 2.4 (Table not currently used)

## 2.5 PTS-approved POI Devices Supported

### Instructions:

- Only list each unique PTS Approval # once.
- List ALL associated hardware (HW) and firmware (FW) versions supported by the Encryption Management Services or Solution and tested as part of the P2PE assessment.
- Ensure all the information below is correct, accurate, and there are no discrepancies between the information listed here and the information present on the POI device's associated PTS Approval listing.
- Do **NOT** include POI devices (including HW and/or FW) that are ineligible for P2PE (e.g., non-SRED).
- Do **NOT** include HW and/or FW on the POI device listing that was NOT tested as part of the P2PE assessment.

**Note 1:** Be advised there can be POI device approval listings that appear similar/identical on the PCI SSC list of Approved PTS devices, however, they are associated with different major versions of the PTS POI Standard. Be sure the correct listing is being referenced and utilized in the assessment.

**Note 2:** Clicking the PTS Approval # on the list of Approved POI Devices will display additional information. Be advised that the designators shown under "Functions Provided" do NOT necessarily apply to every HW and FW version for that PTS approval listing. Ensure that the requisite P2PE requirements are met and satisfied per POI Device Type (refer to the P2PE Glossary) included in the assessment. For each applicable PTS Approval #:

- Do **NOT** infer every HW and/or FW listed is SRED approved.
- Do **NOT** infer the account data capture or communication interface designators apply to every HW and/or FW listed.

[https://www.pcisecuritystandards.org/assessors\\_and\\_solutions/pin\\_transaction\\_devices](https://www.pcisecuritystandards.org/assessors_and_solutions/pin_transaction_devices)

Add additional rows as necessary.

PTS Approval # <i>(One unique # per row)</i>	Make / Mfr.	Model Name / Number	Hardware (HW) #(s) Tested <i>(comma delimited)</i>	Firmware (FW) #(s) Tested <i>(comma delimited)</i>

## 2.6 (Table not currently used)

## 2.7 Additional Encryption Implementations

Are additional account-data encryption implementations supported within the scope of this assessment? (E.g., this could be a multi-acquirer or multi-P2PE Solution scenario.)

**Note:** While the P2PE Application is not permitted to encrypt clear-text account data, it may still be involved in supporting additional encryption implementations.

Yes (If Yes, provide details below)

No (If No, leave details blank)

Describe the additional account data encryption implementations. Where there is more than one implementation, clearly describe each implementation along with the applicable entity (e.g., acquirer / solution provider) managing it.

## 2.8 Summary of P2PE Assessment Compliance Status

P2PE Compliance Details	Compliant	Comments (optional):
Application Security (Domain 2)	<input type="checkbox"/> Yes <input type="checkbox"/> No	

### 3. Details and Scope of P2PE Assessment

#### 3.1 Scoping Details

Describe how the accuracy of the scope for the P2PE Application assessment was validated, including:

- The methods or processes used to identify all elements in scope of the P2PE Application assessment:
  
- How the scope of the assessment was confirmed to be accurate and to cover all aspects of the P2PE Application:

### 3.2 P2PE Application Architecture Details

**Provide detailed descriptions and/or diagrams (below) to illustrate how the application functions in a typical implementation.**

Enter any relevant information below that is not adequately captured within the diagram(s), otherwise mark “**N/A**”. Do not leave anything blank.

**Note:** If the implementation differs between different POI Device Types, describe those differences adequately, as applicable.

**Describe:**

- All application processes related to each function:

- All communication channels, connection methods, and communication protocols used by the application for all internal and external communication channels:

- Details of any protection mechanisms (for example, encryption, truncation, masking, etc.) applied to account data by the application:

- Other necessary application functions or processes, as applicable:

Identify any features of the application that were **not** included in the scope of the assessment and explain why, otherwise mark “**N/A**”:

<Insert P2PE Application architecture diagram(s) here>

### 3.3 P2PE Application Data Flows

For **each** POI Device Type on which the application was tested:

- Provide **high-level** data-flow diagram(s) that shows details of all flows of account data, including:
  - All flows and locations of encrypted account data (including data input, output, and within the POI device)
  - All flows and locations of clear-text account data (including data input, output, and within the POI device).
  - All flows and locations of truncated account data (including data input, output, and within the POI device).
- Identify the following for each data flow:
  - How and where account data is transmitted, processed, and/or stored
  - The types of account data involved (for example, full track, PAN, expiry date, etc.)
  - All components involved in the transmission, processing, or storage of account data

**Note:** Include all types of data flows, including any output to hard copy/paper media.

Provide any additional information below that is not adequately captured within the diagram(s). Otherwise, check **No Additional Details**.

No Additional Details

<Additional Details, as needed>

<Insert P2PE Application data-flow diagram(s) here>

### 3.4 Application Dependencies

Identify and list all application dependencies required for the function of the application.

**Note:** It is not the intent to re-list POI device information (e.g., POI device hardware and/or firmware).

**Description and role of each dependency necessary for the application's function:**

### 3.5 Facilities

#### Lab/Test environment(s) used by the P2PE Assessor for this assessment (add rows as necessary)

Identify whether the lab/test environment was provided by the P2PE PA-QSA Company and/or the Application Vendor:

P2PE PA-QSA Company **and/or**  Application Vendor

Address of the lab/test environment(s) used for this assessment:	P2PE PA-QSA Company:
	Application Vendor:

Describe the lab/test environment(s) used for this assessment. When more than one environment is used, be clear which lab environment is being described.

#### Other facilities INCLUDED in the scope of this assessment (add additional rows as necessary)

Were any additional facilities included in the scope of the assessment?

Yes (*If Yes, document below*)  No (*If No, leave details blank*)

Description and purpose of facility included in the assessment	Address of facility

#### Relevant facilities EXCLUDED from the scope of this assessment (add additional rows as necessary)

Were any relevant facilities excluded from the scope of the assessment?

Yes (*If Yes, document below*)  No (*If No, leave details blank*)

Description and purpose of facility excluded from assessment	Address of facility	Explanation why the facility was excluded from the assessment

### 3.6 Documentation Reviewed

Identify and list all reviewed documents below. Add additional rows to each section as necessary.

If the P2PE Application Implementation Guide consists of more than one document, the brief description below should explain the purpose of each document it includes, such as for a different POI Device Types, for different functions, for different uses of the P2PE Application, etc.

If an IG covers ALL the POI devices detailed in Table 2.5, denote 'ALL' in the last column, otherwise denote only the specific PTS Approval #'s specific to the IG.

#### P2PE Application Implementation Guide(s) (IGs):

Reference # <i>(optional use)</i>	Document Name <i>(Title of the IG)</i>	Version Number of the IG	Document Date <i>(latest version date)</i>	Which POI Device Type(s) is Addressed? <i>(Enter PTS Approval #'s - comma delimited)</i> <i>(Must align with Table 2.5)</i>

#### All other documentation reviewed for this P2PE Application assessment:

Reference # <i>(optional use)</i>	Document Name <i>(including version, if applicable)</i>	Document Date <i>(latest version date)</i>	Document Purpose <i>(brief summary)</i>

### 3.7 Individuals Interviewed

List of all personnel interviewed for this assessment. (*Insert additional rows as necessary*).

Reference # <i>(optional use)</i>	Interviewee's Name	Job Title	Company	Summary of Topics Covered <i>(brief summary)</i>

### 3.8 (Table not currently used)

--

### 3.9 Key Matrix

**List all cryptographic key types used by the P2PE Application**

Reference Annex C in the P2PE Standard. Insert additional rows as necessary.

**Key ID:** Retain generic ID or use specific IDs from assessment

**Key Type:** E.g., DEK, MFK, BDK, KEK, IEK, PEK, MAC, Session, Transport, Public, Private, etc.

**Algorithm:** E.g., TDEA, AES, RSA, DSA, ECC, etc.

**Key Length:** Full length (*include parity bits as applicable*)

**Key Mgmt:** E.g., DUKPT, MK/SK, Fixed, One-time use, etc.

Key ID	Key Type	Algorithm	Key Mgmt	Key Length (bits)	Description & Purpose
Key_1					
Key_2					
Key_N					

### 3.10 Truncation Formats

#### List each truncation format supported by the Application

This table must align with the findings for requirement 2A-3.1.1.

PAN Length (e.g., 16 digits)	BIN Length (e.g., 8 digits)	Which digits are retained? (e.g., First 6, Last 4)	Payment Brand	Is the truncated PAN created by the Application or received via an input to the Application (e.g., from the POI device's firmware)?

## 4. Findings and Observations

“In Place” may be a mix of “In Place” and “Not Applicable” responses, however it must not include any “Not in Place” responses.

## Application Security – Summary of Findings

P2PE Application Security Validation Requirements		Summary of Findings (check one for <b>EVERY</b> row)		
		In Place	N/A	Not in Place
<b>DOMAIN 2</b>				
<b>2A Protect PAN and SAD</b>				
<b>2A-1</b>	<i>The application executes on a PCI-approved POI device with SRED enabled and active.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2A-2</b>	<i>The application does not store PAN and/or SAD for any longer than business processes require.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2A-3</b>	<i>The application does not transmit clear-text PAN and/or SAD outside of the POI device, and only uses communication methods included in the scope of the PCI-approved POI device evaluation.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B Develop and maintain secure applications.</b>				
<b>2B-1</b>	<i>The application is developed and tested according to industry-standard software development life cycle practices that incorporate information security.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-2</b>	<i>The application is implemented securely, including the secure use of any resources shared between different applications.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-3</b>	<i>The application vendor uses secure protocols, provides guidance on their use, and performs integration testing on the final application.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-4</b>	<i>Applications do not implement any encryption functions in lieu of SRED encryption. All such functions are performed by the approved SRED firmware of the POI device.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C Implement secure application-management processes.</b>				
<b>2C-1</b>	<i>New vulnerabilities are discovered and applications are tested for those vulnerabilities on an ongoing basis.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-2</b>	<i>Applications are installed and updates are implemented only via trusted and cryptographically authenticated processes using an approved security mechanism evaluated for the PCI-approved POI device.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-3</b>	<i>Maintain instructional documentation and training programs for the application's installation, maintenance/upgrades, and use.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Document All Requirements Determined to be Not Applicable

'Not Applicable', or 'N/A', is only acceptable as a finding where the requirement, through testing and review, is determined to not apply to the P2PE Product.

All N/A responses require reporting on testing performed (including interviews conducted and documentation reviewed) and must explain how it was determined that the requirement does not apply within the scope of the assessment for the P2PE Product.

**Note:** 'Not Applicable' cannot be used by entities that provide only partial aspects of a defined Component Provider service to validate to that Component Provider type. Refer to the "P2PE Applicability of Requirements" in the P2PE Program Guide.

Every requirement denoted as 'N/A' in the reporting section below must be documented in this table and vice versa.

List requirements in the order as they appear in the reporting section below. Insert additional rows if needed.

Requirement	Document how it was determined that the requirement is Not Applicable to the P2PE Product under assessment

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2A-1.1</b> The application must be intended for use on a POI device approved per the PCI PTS program, with SRED (secure reading and exchange of data). The PTS approval listing must match the following characteristics: <ul style="list-style-type: none"><li>• Model name and number</li><li>• Hardware version number</li><li>• Firmware version number</li><li>• SRED listed as a function provided.</li></ul>		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2A-1.1</b> For each POI device type used by the application, examine the POI device configurations and review the PCI SSC list of Approved PTS Devices to verify that all of the following POI device characteristics match the PTS listing: <ul style="list-style-type: none"><li>• Model name/number</li><li>• Hardware version number</li><li>• Firmware version number</li><li>• SRED listed as a function provided.</li></ul>	For each POI device type used by the application, describe how the POI device configurations observed verified that all of the POI device characteristics at <b>2A-1.1</b> match the PTS listing:  <i>&lt;Report Findings Here&gt;</i>			
<b>2A-1.2</b> The application must only use the PTS SRED-validated account-data-capture mechanisms of the underlying POI device for accepting and processing P2PE transactions.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2A-1.2</b> For each type of POI device being assessed as part of the application assessment, verify that the application only uses SRED-validated account-data-capture mechanisms.	For each POI device type used in the application, describe how the application only uses SRED-validated account-data-capture mechanisms:  <i>&lt;Report Findings Here&gt;</i>			

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2A-2.1</b> The application vendor must maintain current documentation for all flows and provide business justification for all uses of PAN and/or SAD input into, processed by, and output from the application.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2A-2.1.a</b> Interview software personnel and examine the application's design documentation to verify it documents all flows and justifies all uses of PAN and/or SAD input into, processed by, and output from the application.	Software personnel interviewed:	<Report Findings Here>		
	Application design documentation reviewed:	<Report Findings Here>		
<b>2A-2.1.b</b> Perform a source-code review and verify that PAN and/or SAD are only utilized according to the documentation.	Describe how the source-code review verified that PAN and/or SAD are only utilized according to the documentation:			
	<Report Findings Here>			
<b>2A-2.2</b> The application must not store PAN and/or SAD (even if encrypted) as follows:	<ul style="list-style-type: none"> <li>Application must not store PAN data after the payment transaction is complete.</li> <li>Application must not store SAD after authorization is complete.</li> </ul>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Note: Storage of encrypted PAN data is acceptable during the business process of finalizing the payment transaction if needed (e.g., offline transactions). However, at all times, SAD is not stored after authorization is complete.</i>				
<b>2A-2.2.a</b> Examine the application's design documentation and verify it includes a description of the following:	Application design documentation reviewed:	<Report Findings Here>		
<b>2A-2.2.b</b> Perform a source-code review to verify that the application is designed such that:	Describe how the source-code review verified that the application is designed such that PAN is not stored after the payment transaction is completed:			
	<Report Findings Here>			
	Describe how the source-code review verified that the application is designed such that SAD is not stored after authorization is completed:			
		<Report Findings Here>		

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2A-2.2.c</b> Install and configure the application according to the application vendor's documentation, including the application's Implementation Guide. Using an appropriate "test platform" (if necessary), perform test transactions that utilize all functions of the application that handle account data. Use forensic tools and/or methods (commercial tools, scripts, etc.) to verify that: <ul style="list-style-type: none"> <li>• PAN is not stored after the payment transaction is completed.</li> <li>• SAD is not stored after authorization is completed.</li> </ul>	Describe test transactions performed (must utilize all functions of the application that handle account data):			
	<Report Findings Here>			
	Describe forensic tools and/or methods used to inspect the test transactions:			
	<Report Findings Here>			
<b>2A-2.3</b> The application must not retain PAN and/or SAD in working memory any longer than strictly necessary.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2A-2.3.a</b> Examine the application's design documentation and verify it contains a detailed description of the function of the application, including how it ensures the application does not retain PAN and/or SAD in working memory any longer than strictly necessary.	Application design documentation reviewed:	<Report Findings Here>		
<b>2A-2.3.b</b> Perform a source-code review and verify that PAN and/or SAD is cleared from all working memory locations after use, including local variables (before exiting the function).	Describe how the source-code review verified that PAN and/or SAD is cleared from all working memory locations after use, including local variables (before exiting the function):			
	<Report Findings Here>			
<b>2A-2.3.c</b> Install and configure the application according to the application vendor's documentation, including the application's Implementation Guide. Using an appropriate "test platform" (if necessary), perform test transactions that utilize all functions of the application that handle account data. Use forensic tools and/or methods (commercial tools, scripts, etc.) to verify the application clears all working memory locations utilized for the temporal retention of PAN and/or SAD during processing.	Describe test transactions performed (must utilize all functions of the application that handle account data):			
	<Report Findings Here>			
	Describe forensic tools and/or methods used to inspect the test transactions:			
	<Report Findings Here>			

## Domain 2: Application Security – Reporting

Describe how the source-code review verified that applications do not bypass or render ineffective any OS hardening which is implemented by the POI device:  <i>&lt;Report Findings Here&gt;</i>			
<b>2B-2.5</b> Perform a source-code review and verify that applications do not bypass or render ineffective any OS hardening which is implemented by the POI device, in accordance with the device vendor's security guidance.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-2.5</b> Perform a source-code review and verify that applications do not bypass or render ineffective any encryption or account-data-security methods implemented by the POI device, in accordance with the device vendor's security guidance.	Describe how the source-code review verified that applications do not bypass or render ineffective any encryption or account-data-security methods implemented by the POI device:  <i>&lt;Report Findings Here&gt;</i>			
<b>2B-2.6</b> If the application provides configuration/update functionality at-the-terminal (e.g., using an on-screen menu system), the application must not bypass or render ineffective any applicable controls contained within this standard.  <i>Note: Some applications may provide administrative or other privileged functions at the terminal, such as the ability to load whitelists or change other application configurations. Any such functions provided in this way must meet all applicable P2PE requirements.</i>		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-2.6</b> If the application provides configuration/update functionality at the terminal, perform a functional test of the application loaded on each applicable POI device type and verify that the application does not bypass or render ineffective any applicable controls contained within this standard.	Describe how functional test of the application loaded on each applicable POI device type verified that the application does not bypass or render ineffective any applicable controls contained within this standard:  <i>&lt;Report Findings Here&gt;</i>			

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2B-3.1</b> The application developer's process must include full documentation, and integration testing of the application and intended platforms, including the following:		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-3.1</b> Through observation and review of the application developer's system development documentation, confirm the application developer's process includes full documentation and integration testing of the application and intended platforms, including the following:	Application developer's system development documentation reviewed:	<Report Findings Here>		
<b>2B-3.1.1</b> The application developer must provide security guidance describing how cryptographic keys and/or certificates have to be used.  <i>Examples of guidance include which cryptographic certificates to load, how to load account-data keys (through the firmware of the device), when to roll keys, etc.</i>		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-3.1.1</b> Review the application's Implementation Guide required at <b>2C-3</b> of this document, and confirm it includes security guidance for solution providers, describing how cryptographic keys and/or certificates have to be used and managed.	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2B-3.1.1</b> :	<Report Findings Here>		
<b>2B-3.1.2</b> The application developer must perform final integration testing on the device, which includes identification and correction of any residual vulnerabilities stemming from the integration with the vendor's platform.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-3.1.2</b> Interview application developers to confirm that final integration testing, which includes identification and correction of any residual vulnerabilities stemming from the integration with the vendor's platform, was performed.	Application developers interviewed:	<Report Findings Here>		

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2B-4.1</b> The application must not directly encrypt clear-text account data. The application must not implement any account data encryption functions that bypass or are intended to be used instead of the approved SRED encryption functions of the POI device's firmware.	<i>Note: The application may provide additional encryption on the SRED-encrypted account data however it cannot bypass or replace the SRED encryption of the clear-text account data.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-4.1.a</b> Examine the application's Implementation Guide required at <b>2C-3</b> of this document and verify the description of the application's function includes the following: <ul style="list-style-type: none"> <li>• Confirmation that the application does not perform encryption of clear-text account-data, nor does it replace the POI device's SRED encryption</li> <li>• A description of the purpose and encryption method for any encryption provided by the application in addition to SRED encryption.</li> </ul>	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2B-4.1.a</b> :	<Report Findings Here>		
<b>2B-4.1.b</b> Perform a source-code review to verify that any application functionality facilitating the encryption of account data utilizes the approved cryptographic algorithm(s) and associated key-management functions of the POI device's SRED firmware and is not implemented within the application itself.	Describe how the source-code review verified that any application functionality facilitating the encryption of account data utilizes the approved cryptographic algorithm(s) and associated key-management functions of the POI device's SRED firmware and is not implemented within the application itself:	<Report Findings Here>		
<b>2B-4.1.c</b> Install and configure the application according to the application vendor's documentation, including the application's Implementation Guide. Using an appropriate "test platform" (if necessary), perform test transactions that utilize all functions of the application that handle account data. Use forensic tools and/or methods (commercial tools, scripts, etc.) to verify the application does not perform encryption of account data nor does it replace the SRED encryption performed by the underlying POI device's firmware.	Describe test transactions performed (must utilize all functions of the application that handle account data):	<Report Findings Here>		
	Describe forensic tools and/or methods used to inspect the test transactions:	<Report Findings Here>		
	<Report Findings Here>			

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2B-4.2</b> The application must not be able to decrypt SRED-encrypted account data. I.e., the application must not be able to recover the original clear-text account data from the encrypted account data.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2B-4.2.a</b> Examine the application's <i>Implementation Guide</i> required at <b>2C-3</b> of this document and verify the description of the application's function includes the following:  Confirmation that the application is not capable of decrypting any clear-text account data encrypted by the SRED functions of the underlying POI firmware.	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2B-4.2.a</b> :	<Report Findings Here>		
<b>2B-4.2.b</b> Perform a source-code review to verify that the application is not capable of decrypting any clear-text account data encrypted by the SRED functions of the underlying POI firmware.	Describe how the source-code review verified that the application is not capable of decrypting any clear-text account data encrypted by the SRED functions of the underlying POI firmware.	<Report Findings Here>		
<b>2B-4.2.c</b> Install and configure the application according to the application vendor's documentation, including the application's <i>Implementation Guide</i> . Using an appropriate "test platform" (if necessary), perform test transactions that utilize all functions of the application that handle account data. Use forensic tools and/or methods (commercial tools, scripts, etc.) to verify the application is not capable of decrypting any clear-text account data encrypted by the SRED functions of the underlying POI firmware.	Describe test transactions performed (must utilize all functions of the application that handle account data):	<Report Findings Here>		
	<Report Findings Here>	Describe forensic tools and/or methods used to inspect the test transactions:		
	<Report Findings Here>	<Report Findings Here>		

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2C-1.1</b> Software developers must establish and implement a process to identify and test their applications for security vulnerabilities and implementation errors prior to every release (including updates or patches) using manual or automated vulnerability assessment processes.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-1.1.a</b> Obtain and examine processes to identify new vulnerabilities and test applications for vulnerabilities that may affect the application. Verify the processes include the following: <ul style="list-style-type: none"> <li>• Using outside sources for security vulnerability information.</li> <li>• Periodic testing of applications for new vulnerabilities.</li> </ul>	Documented processes reviewed:	<Report Findings Here>		
<b>2C-1.1.b</b> Interview responsible software vendor personnel to confirm the following: <ul style="list-style-type: none"> <li>• New vulnerabilities are identified using outside sources of security vulnerability information.</li> <li>• All applications are tested for vulnerabilities.</li> </ul>	Responsible software vendor personnel interviewed:	<Report Findings Here>		
<b>2C-1.2</b> Software vendors must establish and implement a process to develop and deploy critical security updates to address discovered security vulnerabilities in a timely manner.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Note:</b> A “critical security update” is one that addresses an imminent risk to account data.				
<b>2C-1.2.a</b> Obtain and examine processes to develop and deploy application security upgrades. Verify that processes include the timely development and deployment of critical security updates to customers.	Documented processes reviewed:	<Report Findings Here>		
<b>2C-1.2.b</b> Interview responsible software-vendor personnel to confirm that application security updates are developed and critical security updates are deployed in a timely manner.	Responsible software vendor personnel interviewed:	<Report Findings Here>		

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2C-2.1</b> Ensure that all application installations and updates are cryptographically authenticated as follows:		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-2.1.1</b> All application installations and updates on a POI device are cryptographically authenticated using the approved security mechanisms of the POI device's firmware.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-2.1.1.a</b> Examine the application's Implementation Guide required at <b>2C-3</b> of this document and verify that it includes the following: <ul style="list-style-type: none"> <li>• A description of how the application is cryptographically authenticated using the approved security mechanisms of the POI device's firmware for any application installations and updates.</li> <li>• Instructions for how to use the approved security mechanisms to perform application installations and updates.</li> <li>• A statement that application installations and updates cannot occur except by using the approved security mechanisms of the POI device's firmware.</li> </ul>	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2C-2.1.1.a</b> :	<Report Findings Here>		
<b>2C-2.1.1.b</b> Perform a source-code review to verify that the application only allows installations and updates using the approved security mechanisms of the POI device's firmware.	Describe how the source-code review verified that the application only allows installations and updates using the approved security mechanisms of the POI device's firmware:	<Report Findings Here>		
<b>2C-2.1.1.c</b> Install and configure the application according to the application vendor's documentation, including the application's Implementation Guide. Use forensic tools and/or methods (commercial tools, scripts, etc.) to verify that, by following the Implementation Guide, the application only allows installations and updates using the approved security mechanisms of the POI device's firmware.	Describe test transactions performed (must utilize all functions of the application that handle account data): <Report Findings Here> Describe forensic tools and/or methods used to inspect the test transactions: <Report Findings Here>			
<b>2C-2.1.1.d</b> After the application is installed and configured in accordance with the Implementation Guide, attempt to perform an installation and an update using non-approved security mechanisms, and verify that the POI device will not allow the installation or update to occur.	Describe how attempting to perform an installation and an update using non-approved security mechanisms verified that the POI device will not allow the installation or update to occur: <Report Findings Here>			

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2C-2.1.2</b> The application developer includes guidance for whoever signs the application, including requirements for using an SCD with dual control for the application-signing process.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-2.1.2</b> Examine the application's Implementation Guide required at <b>2C-3</b> of this document and verify that it includes the following: <ul style="list-style-type: none"> <li>• Instructions for how to sign the application.</li> <li>• Instructions how to use an SCD with dual control for the application-signing process.</li> <li>• A statement that all applications must be signed via the instructions provided in the Implementation Guide.</li> </ul>	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2C-2.1.2</b> :	<Report Findings Here>		
<b>2C-3.1</b> The process to develop, maintain, and disseminate an Implementation Guide for the application's installation, maintenance, upgrades and general use includes the following:		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-3.1</b> Examine the Implementation Guide and related processes, and verify the guide is disseminated to all relevant application installers and users (including customers, resellers, and integrators).	Documented processes for dissemination reviewed:	<Report Findings Here>		
<b>2C-3.1.1</b> Addresses all requirements in P2PE Domain 2 wherever the Implementation Guide is referenced.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-3.1.1</b> Verify the Implementation Guide covers all related requirements in P2PE Domain 2.	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2C-3.1.1</b> :	<Report Findings Here>		

## Domain 2: Application Security – Reporting

Requirements and Testing Procedures	Reporting Instructions	Assessor's Findings		
		In Place	N/A	Not In Place
<b>2C-3.1.2</b> Review of the Implementation Guide at least annually and upon changes to the application or the P2PE Domain 2 requirements, and update as needed to keep the documentation current with:	<ul style="list-style-type: none"> <li>• Any changes to the application (e.g., device changes/upgrades and major and minor software changes).</li> <li>• Any changes to the Implementation Guide requirements in this document.</li> </ul>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-3.1.2.a</b> Verify the Implementation Guide is reviewed at least annually and upon changes to the application or the P2PE Domain 2 requirements.	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2C-3.1.2.a</b> :	<Report Findings Here>		
<b>2C-3.1.2.b</b> Verify the Implementation Guide is updated as needed to keep the documentation current with:	<ul style="list-style-type: none"> <li>• Any changes to the application (e.g., device changes/upgrades and major and minor software changes).</li> <li>• Any changes to the Implementation Guide requirements in this document.</li> </ul>	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2C-3.1.2.b</b> :	<Report Findings Here>	
<b>2C-3.1.3</b> Distribution to all new and existing application installers (e.g., solution providers, integrator/resellers, etc.), and re-distribution to all existing application installers every time the guide is updated.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-3.1.3</b> Verify the Implementation Guide is distributed to new application installers, and re-distributed to all application installers every time the guide is updated.	Identify the P2PE Assessor who confirms that the application's Implementation Guide includes all details for <b>2C-3.1.3</b> :	<Report Findings Here>		
<b>2C-3.2</b> Develop and implement training and communication programs to ensure application installers (e.g., solution providers or integrators/resellers) know how to implement the application according to the Implementation Guide.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-3.2</b> Examine the training materials and communication program, and confirm the materials cover all items noted for the Implementation Guide throughout P2PE Domain 2.	Training materials and communication program documentation reviewed:	<Report Findings Here>		
<b>2C-3.2.1</b> Review the training materials for application installers on an annual basis and whenever new application versions are released. Update as needed to ensure materials are current with the Implementation Guide.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>2C-3.2.1</b> Examine the training materials for resellers and integrators and verify the materials are reviewed on an annual basis and when new application versions are released, and updated as needed.	Training materials and communication program documentation reviewed:	<Report Findings Here>
